## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 28 and 29 are rejected under 35 U.S.C. 102(b) as being anticipated by Fossum et al. (US 5949483).

Regarding claim 28, Fossum teaches a method of controlling a group of active pixel sensors comprising:

for each of a plurality of particular subgroups (603) of the group of active pixel sensors (603) such that buffered voltage sensor signals (610) of the active pixel sensors of the particular subgroup are substantially simultaneously coupled to an output node to provide a collective output signal for the particular subgroup (column 11 line 23+); and recording at the output node an indication of the collective output signal (column 11 line 54+).

Regarding claim 29, Fossum teaches an image sensor comprising:

a collection of active pixel sensors configured to generate buffered voltage sensor signal output (610);

circuitry to control the collection of active pixel sensors such that, for each of a plurality of particular subgroups (603) of the group of active pixel sensor, the buffered voltage sensor signal outputs (610) of the active pixel sensors of the particulars

subgroup are substantially simultaneously coupled to an output node of an image sensor to provide a collective output signal for the particular subgroup (column 11 line 23+).

***Allowable Subject Matter***

Claims 1-27 and 30-37 are allowed over prior art.

The following is a statement of reasons for the indication of allowable subject matter: None of the prior art teaches or suggest that sensor output selection circuitry configured to selectively couple a buffered voltage sensor signal to an output of the active pixel sensor when the row to which the active sensor belongs is selected based on one of a set of row select signals corresponding to the row and row select signal generating circuitry configured to generate a set of row select signals to substantially simultaneously select a corresponding set of plural particular rows such that each of active pixel sensors in the selected corresponding set of plural particular rows substantially simultaneously provides the buffered voltage sensor signal for that active pixel sensor to the column line for the column to which that active pixel sensor belongs such that an output node of each column line indicates a collective output signal for the active pixel sensors in that selected corresponding set of plural particular rows as claimed in independent claims.

***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
